

ELECTRICITY SOLUTIONS

Capacity Pass-Through

Ideal for savvy electricity customers

A capacity pass-through product allows you to float capacity charges while hedging other costs. Capacity refers to your peak demand costs, which can account for roughly 30% of the total energy cost. Floating capacity and actively managing peak consumption can reduce peak demand costs over time.

Capacity Pass-Through

IGS Energy delivers personalized support to give you confidence that your energy is being supplied in alignment with your goals.

Suitable For Your Business If You:

Practice “peak shaving” in an effort to achieve better capacity tags in second year of contract

Believe that a future decrease in capacity costs is likely

Can assume risk in exchange for the potential of reward

Evaluation Matrix

Billing Structure*

Convenience of one monthly bill with the utility’s charges for distribution, as well as IGS’ charges for fixed electricity supply and capacity charges all included.

* Billing structure is subject to change based on utility restrictions.
